Product presentation

Gremotool clamping devices with System 3R

The automated production requires flexible and precise clamping devices. System 3R's zero-point clamping system provide a larger part of this flexibility. Different clamping devices require a common interface so that they can be customised to the requirements of the workpiece to be clamped. The ideal solution is clamping devices of Gremotool, which precisely connect the workpiece and the zero-point clamping system.

Product presentation

Advantages Gremotool with System 3R

Clamping force

The high clamping forces of the Gremotool clamping devices can be influenced by torque or pressure. This makes it possible to clamp plastic workpieces without deformation and forged parts with a secure hold without damaging the clamping device.

Centering precision

The design of all Gremotool centring vices guarantees the user precise centring of +/-0.02 mm in the centre of the clamping device.

Accessibility

The Gremotool clamping devices are suitable for various application scenarios. Accessibility for the processing machine is a key element in enabling the best possible processing strategy. They can be used directly on the zero-point clamping system, on pallets or on towers.

Compact

The compact power package fit into any machine and guarantee a firm hold of the workpiece for machining. The solid construction with low weight also allows manual retooling.

Enclosed and low maintenance

Due do the design of the centre clamps, no chips remain in the clamping device. This means that all components are subject to less wear, which reduces maintenance to a minimum.

Short set-up times

Gremotool clamping devices are all equipped with various connection options. No special versions for standard pallets are required to change the clamping devices, precision pins and screws are loosened and tightened again.

Large range of jaws

The jaws on all Gremotool centre clamps are interchangeable. From gripping jaws to soft jaws made of aluminium, no requirements remain unfulfilled for the demands placed on the workpieces.

Automating the process

If special requirements of the automation are placed on the clamping devices, the Gremotool clamping devices are ideal. The clamping devices can be equipped with various interfaces, including those integrated directly into the clamping device. This allows the machining area of the machine to be utilised even more optimally.

Short delivery times

The short delivery times of jaws allows to work quickly and flexibly with the Gremotool range of jaws.

Get started immediately

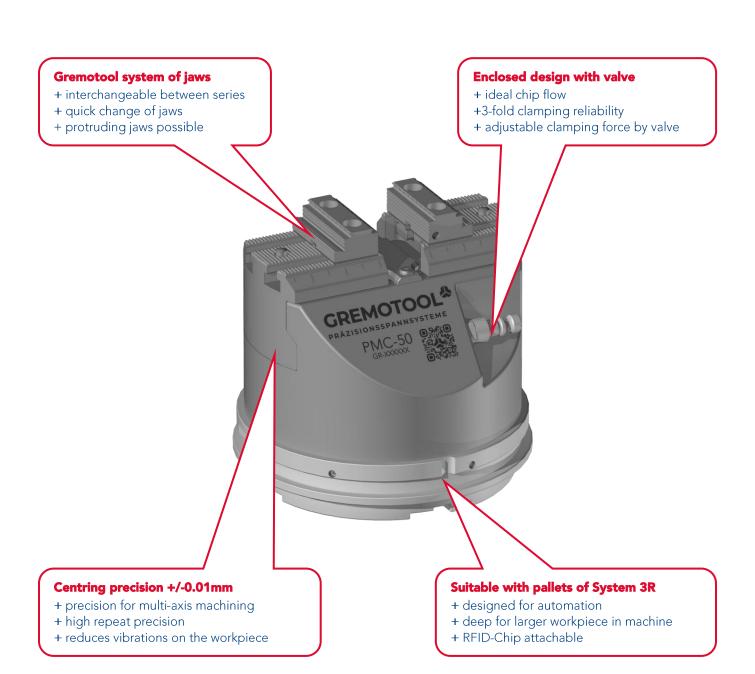

A pair of gripper jaws is supplied with each clamping device at no extra cost, allowing you to clamp raw parts at no additional costs.

Overview of products

Gremotool clamping devices and System 3R

System 3R Macro with SC

The SC series can be mounted on the Macro pallets from System 3R without modifications.

It is also possible to attach only the reference element directly to the SC series without a superstructure.

The height of the SC series enables optimum accessibility for 5-axis machining on workpieces.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the SC series, please get directly in touch with us or consult the SC catalogue.

SC-34 with System 3R Macro Pallet

SC-40 with System 3R Macro Pallet

System 3R Macro with LC

It is also possible to attach only the reference element directly to the LC series without a superstructure.

Due to the enclosed design of the LC series, no chips remain on the clamping device.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the LC series, please get directly in touch with us or consult the LC catalogue.

LC-34 with System 3R Macro Pallet

LC-40 with System 3R Macro Pallet

Variant table

System 3R MacroMagnum with PMC

The PMC/HMC-50 is designed to fit the MacroMagnum pallet by System 3R.

This is supplied from below through the pallet using pneumatics or hydraulics.

The clamping force of the PMC can be individually adjusted to the workpiece using the reducing valve.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the PMC series, please get directly in touch with us or consult the PMC catalogue.

PMC-50 with System 3R MacroMagnum Palette

HMC-50 with System 3R MacroMagnum-Palette

Variant table

System 3R MacroMagnum with SC

The SC series can be mounted on System 3R MacroMagnum pallets without modifications.

The height of the SC series enables optimum accessibility for 5-axis machining on workpieces.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the SC series, please get in touch directly with us or consult the SC catalogue.

Further variants can be requested directly by Gremotool.

System 3R GPS-240 with RC

The RC-series can be mounted on the pore hole grid panels and on the GPS-240 pallets form System 3R without modifications.

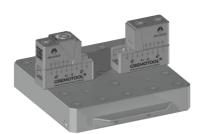

The modular design of the RC-series allows different clamping situations for the workpieces.

The quick-change jaw system offers a pull-down function and the right jaw for the workpieces.

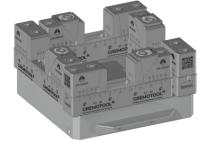

For the exact data of the RC series, please get directly in touch with us or consult the RC catalogue.

Variant table

System 3R Dynafix with PMC

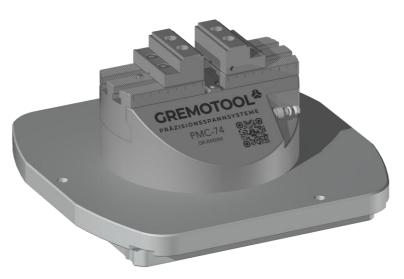

The PMC series is designed to fit the Dynafix pallet from System 3R.

Pneumatically supplied from below through the pallet.

Using the reducing valve the clamping force can be individually adjusted to the workpiece.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the PMC series, please get directly in touch with us or consult the PMC catalogue.

PMC-74 with System 3R Dynafix Pallet

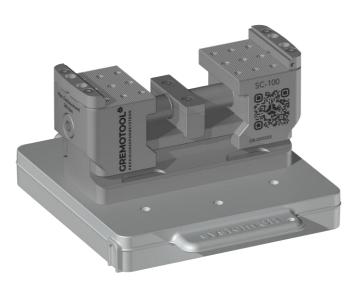

System 3R Dynafix with SC

The SC series can be mounted on the Dynafix pallets from System 3R without any modifications.

The height of the SC series enables optimum accessibility for 5-axis machining on workpieces.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the SC series, please get directly in touch with us or consult the SC catalogue.

Variant table

System 3R Delphin with PMC/HMC

The PMC/HMC series is designed to fit the Delphin pallets of System 3R.

Pneumatically or hydraulically supplied from below through the pallet.

The clamping force of the PMC can be individually adjusted to the workpiece using the reducing valve.

The large range of jaws also offers suitable jaws for any application.

For the exact data of the PMC/HMC series, please get directly in touch with us or consult the PMC/HMC cata-logue.

Applications

Zero-point clamping systems

The System 3R centring elements can be attached directly to the clamping system to generate fewer interfaces.

If further requirements are placed on the clamping systems, these can be integrated into the pallet geometries. This frees up several millimetres of machining space without compromising the functionality or automation capability of the clamping devices.

Special dimensions are another way of optimising the space required for production.

For these suggested solutions, please get directly in touch with us.
